SUMMARY

Technical Product Support Specialist with 5+ years of experience in escalated support environments and quality assurance for AI-powered security solutions. Proven ability to diagnose complex technical issues, communicate effectively with diverse user personas, and drive process improvements. Skilled in API debugging, automation with GoLang, and cross-functional collaboration. Demonstrated success in reducing issue resolution time by 63% through systematic process enhancements and technical tool development. Experienced in supporting enterprise clients using AI-driven platforms and ensuring high satisfaction through empathetic, technically precise support. Known for translating complex technical concepts into accessible language for users of all technical backgrounds while maintaining a calm, solution-focused approach in high-pressure situations.

EXPERIENCE

Technical Support & Quality Engineer | DNSFilter | Remote

03/2023 - Present

- Serve as escalation point for complex technical issues involving AI-powered threat detection systems, diagnosing and resolving API integration challenges while maintaining 99% defect-free release rate
- Developed diagnostic utilities in GoLang and Swift that reduced support resolution times by 63%, demonstrating deep user empathy and technical problem-solving for DNSFilter's AI-driven security platform
- Created comprehensive technical documentation in Confluence to educate users and internal teams on product features, troubleshooting procedures, and best practices
- Collaborated cross-functionally with engineering, product, and customer success teams to identify and resolve systemic issues impacting users
- Managed high-urgency incidents during on-call rotations, responding quickly to PagerDuty alerts while maintaining clear communication with stakeholders
- Built comprehensive API test suites in GoLang, creating reusable test frameworks that verified the accuracy of AI-based threat detection responses and ensured seamless integration experiences for enterprise clients
- Participated in weekly code reviews to maintain code quality standards and provide technical feedback

Tier III Technical Support Engineer | DNSFilter | Remote

06/2022 – 03/2023

- Resolved complex Tier III customer escalations for global clients utilizing cloud and on-premises solutions, consistently exceeding CSAT targets through empathetic problem-solving and clear technical communication
- Built and implemented Standard Operating Procedures (SOPs) and key performance indicators (KPIs) that improved support team efficiency by 25%

- Conducted User Acceptance Testing (UAT) on beta releases, providing critical feedback to development teams to enhance product quality
- Served as Zendesk Administrator, optimizing support workflows and reporting to improve case management efficiency
- Trained and mentored new support team members, creating technical resources that accelerated onboarding time by 30% while fostering a collaborative team environment

Application Support Analyst | Acronis SCS | Remote

09/2021 – 06/2022

- Resolved complex technical support cases involving APIs, virtualization platforms, operating systems, and networking issues
- Replicated customer environments to diagnose and troubleshoot intricate technical problems, serving as a technical bridge between customers and development teams
- Documented detailed bug reports in JIRA and authored technical reference guides for internal knowledge base, enhancing team capabilities
- Performed functional testing of products in development stages, providing critical feedback that improved product quality

Tier III Support Specialist | Best Buy | Remote

11/2019 – 09/2021

- Led and mentored a team of 25 support personnel while serving as the primary escalation point for complex technical issues, creating a supportive learning environment that balanced technical excellence with empathetic customer care
- Improved team efficiency by 16% through KPI analysis and targeted process improvements, actively soliciting feedback from team members to identify pain points and collaborative solutions
- Reduced average issue resolution time by 26% by developing comprehensive troubleshooting guides and standard operating procedures, adapting content for different learning styles and technical backgrounds
- Partnered with multiple departments to resolve escalated customer issues, facilitating productive dialogues between technical and business teams to align on customer-centric solutions

SKILLS

- **Technical Expertise:** API Debugging, AI System Support, Technical Documentation, SQL Querying, Bug Tracking & Reporting
- **Support Tools:** Zendesk, JIRA, Confluence, GitHub, Postman, AWS Services, Datadog, Rollbar
- **Development:** GoLang, Swift, PowerShell, Bash, JavaScript (basic)
- **Testing & QA:** Exploratory Testing, API Testing with GoLang, Test Automation, Test Case Development, User Acceptance Testing (UAT)
- **Communication:** Technical Writing, Cross-functional Collaboration, User Education, Process Documentation
- **Networking & Systems:** CompTIA Network+, TCP/IP, DNS, DHCP, VPNs, Cloud Services

CERTIFICATIONS

- CompTIA Network+
